

Worley Hoppers

T.W. Enterprises Inc. supplies numerous dealers across Saskatchewan and custom builds over 1,000 hoppers annually – for any type of grain bin.

The Worley Hopper has a 24" x 24" manhole on every hopper.

The Worley Hopper comes with an 18" x 24" round inlet or a 9" x 14" rectangular inlet.

The Worley Hopper offers 2 different styles of leg braces. (Gusset brace above).

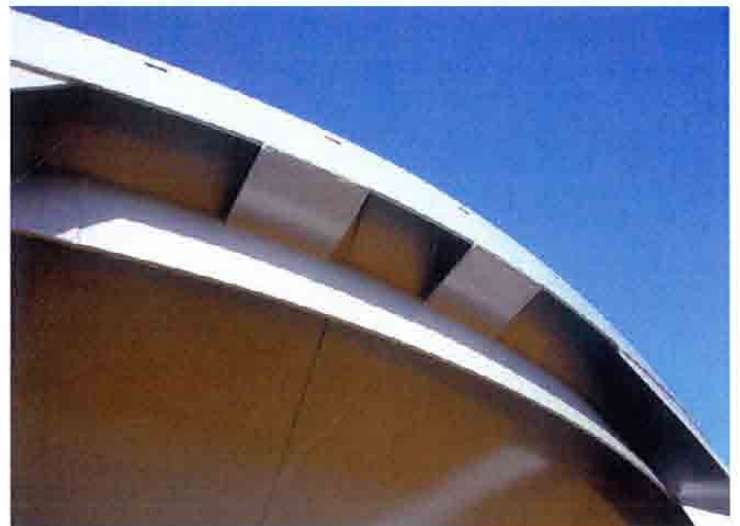

Worley Quality

The Worley Hopper offers 2 different styles of leg braces. (Angle-Iron brace above). The strength and cost of these different braces are the same.

There is full access to bin-mounting holes above each leg.

Continuous welds between the inside and outside band make for a very solid structure.

The shoot on the Worley hopper has 10 plastic bushings that the shootplate slides on. These bushings are adjustable so there is no binding or rusting.

The Worley Hopper can be purchased with an inverted-V aeration duct. These units are a very cost-effective way to aerate and cool the grain – trouble-free.

The Worley Hopper can be purchased with a double 4x4 skid base that is 12" wide or a triple 4x4 skid base that is 20" wide.

The triple skid base is shown here.

The shoot handle is brought all the way out to the leg of the hopper for easy operation.

New in 2010 – our 7200 Sq. Ft. paint booth with draft and climate controller the best in coating and curing quality.

We have been in business for 19 years and are dedicated to a top-quality product and superior service.
